

```
/*This is a custom data model used for saving the complete details of a song together. Every  
time in Android when we want to store a group of data together we create a model class  
* This model class here is used to store the Songs. The information which we need for every  
song is its name(title), artist, data and the date on which that song was added in our  
device*/  
class Songs(var songID: Long, var songTitle: String, var artist: String, var songData:  
String, var dateAdded: Long) {  
}
```
